

R/3® System

As R/3 consultants or project managers, you have a lot of responsibility and often need to act quickly. In addition to your many years of experience, you need something to base your decisions on. As a part of the R/3 System, the IDES system represents an integrated model company. The international specifications driving it as well as the exemplary range of products managed within this system can provide you with the information you need to make your decisions.

IDES International Demonstration and Education System

Get to know the R/3 from a new Perspective

Profit from the Experience of a multinational (Model) Company

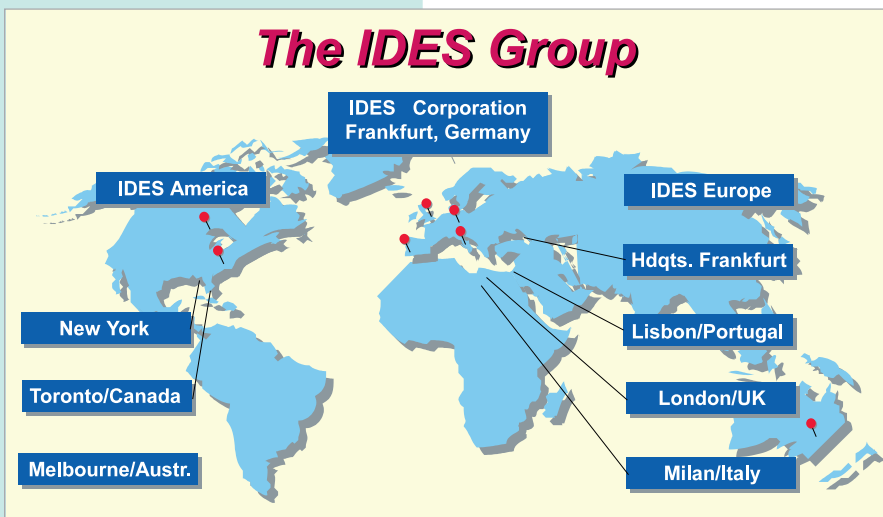

The IDES system is a fully developed model corporation. The international nature of the group of companies in IDES as well as its range of products have been designed to enable this system to reflect real-life scenarios and ensure a high degree of integration of all business processes. The group consists of several model companies that all perform specific tasks. In addition to all the possibilities offered by the R/3 System, the IDES system also models very specific business scenarios.

Use the unlimited Information

Because there is no sensitive corporate information to be protected, such as the current liquidity or sales plans, you are free to move around the IDES corporation as you like. If you want to look behind the Profit Center Accounting scenes or find a decision model for a simplified production procedure such as KANBAN, you can do so, as there is no limit to the information available in the IDES system.

Create High-Quality Prototyping without prior Preparation

The entire organizational structure and master data have been set up to ensure that the general business context is always in the foreground. This allows you to use the prototyping function to adapt certain aspects of the existing structure in line with the individual requirements of your company without having to neglect integration. You can include management in all the design decisions, enabling you to present the most suitable business solution quickly.

Use the Online Help to navigate through the Processes

The online help that has been developed especially for IDES allows you to run through entire business process chains. Even if you are just getting used to working in a new application area, the detailed documentation on processes will guide you safely through the process flows. You can easily skip all the application and department-specific restrictions. You can access detailed descriptions of the process flows, stopping whenever you want and navigating to background information containing business data and meaningful examples that have been tried and tested.

Take a look behind the SAP Training Scenes

The entire R/3 training program complete with exercises and examples has been adapted to the IDES system. Using the training material, you can work through all the course exercises and study the extensive system details on your own if you wish.

Release Upgrades accessible at all Times

As the period of time between releases becomes increasingly shorter due to today's technical advances and the demands of a dynamic market, the user must be able to access the most up-to-date information as quickly and as easily as possible. The IDES system always represents the most current version of the R/3 System and gives you direct access to the new functionality, allowing you to carry out system upgrades without any problems.

Creating a Sales Order

1. Select Logistics → Sales/distribution → Sales.
2. In the Sales menu, select Sales order → Create.
3. Complete the following entry fields:

Field	Data
Order type	OR
Sales organization	3000
Distribution channel	01
Division	01
4. Confirm your entries.
5. Complete the following entry fields:

Field	Data
Sold-to party	3000 (customer)
Purch. order no.	Any
Req. deliv. date	e.g. D 01/30/96
Material	P-103
Order quantity	e.g. 2
6. Confirm your entries.
7. Partners, press Choose.
8. Unloading points, press Choose.
9. Save your entries.
10. Display the stock/requirements situation by selecting Logistics → Production → MRP. In the MRP menu, select Evaluations → Stock/reqmts list.
11. Confirm the entry on the next screen.

Technology and Service

R/3 software is based on Client/Server Architecture. R/3 is designed as an open system for use on operating systems from a variety of vendors. Along with the software, SAP offers you a complete spectrum of services: Professional consulting in organizational and technical issues ranging from project planning to system implementation, qualified staff training, and 24-hour hotline support.

SAP's quality management process for software development meets the international ISO 9001 standards.
