

Developer/2000 and Third Party Tools

Oracle's industry leading Developer/2000 supports a wide variety of third party products and solutions to provide users an even more open, interoperable, and productive product. This is accomplished by using an open design and open interfaces throughout the product. Below are some of the third party interfaces we will support.

Administration Tools Build Developer/2000 applications incorporating administration and project management tools.

- Platinum
- Recon Technologies
- Compuware

Class Libraries/Object Libraries. Expands the UI capabilities of Developer/2000 applications via ActiveX controls.

- ProtoView
- MapInfo

Document Management and Workflow Build Developer/2000 applications incorporating Imaging, Document Management, and Workflow.

- 170 Systems - Integrated solution that brings high performance document imaging capabilities to the Developer/2000 environment.
- Open Text Corporation
- Plexus Software
- Center Line Software

Geographic Information Systems Build Developer/2000 applications incorporating data visualization tools for graphing and report writing.

- ESRI - Allows addition of dynamic, live maps and GIS capabilities to Developer/2000 applications
- MapInfo - Allows mapping capabilities to applications being developed for Developer/2000

GUI Testing. Build automated regression tests to ensure application quality.

- Mercury Interactive (WinRunner) - Offers built-in testing support for Developer/2000.
- Compuware/Direct Technology (QA Center) - Automates testing tasks throughout the development lifecycle and across multiple platforms.
- Segue Software (QA Partner) - Enables QA Partner to provide GUI automated software testing for Developer/2000.
- Rational/SQA - Allows validation of data in Developer/2000 applications without programming scripts or performing manual testing

Heterogeneous Database Access Build Developer/2000 applications that access additional relational and non-relational data sources.

- INTERSOLV - ODBC drivers.
- Technology Rendezvous

Migration/Conversion Tools Use automated migration tools to create applications for Developer/2000.

- Kumaran - Migrate and upgrade applications from earlier versions of Developer/2000 (SQL*Forms 2.0/2.3 and 3.0). Migrate as well RPT reports to Oracle Reports 2.5.
- Sierra Atlantic - Migrates SQL*Forms 3.0 or PowerBuilder applications to Developer/2000.
- Ravel Software- Convert applications built in SQL*Windows or PowerBuilder to Developer/2000.
- FreeSoft - Provides a migration path from Ingres ABF applications to Developer/2000.
- Sonata Software - Migrate FoxPro Applications to Developer/2000.

Performance Testing Ensure that the deployment hardware meets the application's requirements, and ensure that changes to the application do not adversely impact scalability.

- Rational/Pure Atria (Pure Performix) - Allows users to build enterprise capable applications.
- Mercury (LoadRunner)
- Rational/Performance Awareness
- Segue Software

Standards Provides guidelines, standards and reusable components for Developer/2000 applications.

- UCC

System Management/Software Distribution Distribute Developer/2000 applications to remote desktops using the EDM software distribution product.

- Tangram Enterprise Solutions - Provides asset inventory functionality for hardware and software systems.

Tool box Provides tools that can be used inside Developer/2000 to enhance its core features.

- Ravel Software - UnRavel/2000 scans code and estimates the workload involved to support the Year/2000.

Transaction Processing Monitors Provide Developer/2000 front-ends with existing TPM-based applications, and develop new TPM-based applications for greater scalability and availability.

- BEA (Tuxedo) - Tuxedo Integration will be part of Developer/2000 proper

Version Control/Configuration Management Manage the development process and track revisions of applications from within the Developer/2000 environment.

- INTERSOLV - The integration offers customers a comprehensive solution for effectively managing application development. The open interfaces give end users seamless version management capabilities to use as they build applications.
- Rational/Pure Atria (ClearCase) - Provides software configuration management with version control, workspace management, build management and process control.
- Starbase

Web Testing Test applications on the Web

- Mercury (Astra Side Test)
- Segue Software (Silk)
