

Developer/2000 Support for 3rd Party Products

Oracle's industry leading Developer/2000 supports a wide variety of third party products and solutions to provide users an even more open, interoperable, and productive product. This is accomplished by using an open design and open interfaces throughout the product. Below are some of the third party interfaces we will support.

- Administration Tools:** Build Developer/2000 applications incorporating administration and project management tools.
- 1) Digital Tools - The integration will allow project management capabilities within Developer/2000.
- Class Libraries/Object Libraries:**
- 1) Sheridan Software - Expands the UI capability of Developer/2000 applications via ActiveX controls.
- Document Management and Workflow:** Build Developer/2000 applications incorporating Imaging, Document Management, and Workflow.
- 1) Wang - Incorporates imaging technology for Developer/2000.
 - 2) Computron Software, Inc. - Provides the workflow functionality of Computron's Workflow Server.
 - 3) Xsoft - Application generators for Developer/2000.
 - 4) 170 Systems - Integrated solution that brings high performance document imaging capabilities to the Developer/2000 environment.
- Geographic Information Systems:** Build Developer/2000 applications incorporating data visualization tools for graphing and report writing.
- 1) Strategic Mapping - Build Developer/2000 applications integrated with GIS systems.
 - 2) ESRI - Allows addition of dynamic, live maps and GIS capabilities to Developer/2000 applications.
 - 3) MapInfo - Allows mapping capabilities to applications being developed for Developer/2000.
- GUI Testing:** Build automated regression tests to ensure application quality.
- 1) CenterLine Software - Enables development and QA teams to integrate, automate and manage the multitudes of tests, tools and information needed for testing complex network centric, distributed applications throughout the development lifecycle.
 - 2) Mercury Interactive (WinRunner) - Offers built-in testing support for Developer/2000.

- 3) Compuware/Direct Technology (QA Center) - Automates testing tasks throughout the development lifecycle and across multiple platforms.
- 4) Segue Software (QA Partner) - Enables QA Partner to provide GUI automated software testing for Developer/2000.
- 5) SQA - Allows validation of data in Developer/2000 applications without programming scripts or performing manual testing.

Heterogeneous Database Access:

Build Developer/2000 applications that access additional relational and non-relational data sources.

- 1) Attachmate - Provides mainframe connectivity for database and application access.
- 2) Visigenic - Simplifies client/server data access and secures data within all enterprise and Internet computing environments.

Migration/Conversion Tools:

Use automated migration tools to create applications for Developer/2000.

- 1) Kumaran - Migrate and upgrade applications from earlier versions of Developer/2000.
- 2) Sierra Atlantic - Migrate Forms 3.0 or PowerBuilder applications to Developer/2000.
- 3) Ravel - Convert applications built in SQL*Windows or PowerBuilder to Developer/2000.
- 4) TransTech - Provides application and migrations through customized software tools and methodologies.

Performance Testing:

Ensure that the deployment hardware meets the application's requirements, and ensure that changes to the application do not adversely impact scalability.

- 1) Pure Atria (Pure Performix) - Allows users to build enterprise capable applications.

System Management/Software Distribution: Distribute Developer/2000 applications to remote desktops using the EDM software distribution product.

- 1) Novadigm - Incorporates network management technology for Developer/2000.
- 2) Tangram Enterprise Solutions - Provides asset inventory functionality for hardware and software systems.
- 3) BMC - Integrate Developer/2000 applications into BMC's comprehensive Systems Management infrastructure.
- 4) Tivoli - Provides application management solutions to users of Developer/2000.

Transaction Processing Monitors:

Provide Developer/2000 front-ends with existing TPM-based applications, and develop new TPM-based applications for greater scalability and availability.

- 1) BEA (Tuxedo) - Tuxedo Integration will be part of Developer/2000 proper.
- 2) NCR (Top End) - Top End integration released by NCR.
- 3) DEC (ACMS Desktop) - Enables TP Monitor functionality to Developer/2000.
- 4) Transarc - Provides TP Monitor functionality to Developer/2000.

Version Control/Configuration Management: Manage the development process and track revisions of applications from within the Developer/2000 environment.

- 1) INTERSOLV - The integration offers customers a comprehensive solution for effectively managing application development. The open interfaces give end users seamless version management capabilities to use as they build applications.
- 2) Pure Atria (Clearcase) - Provides software configuration management with version control, workspace management, build management and process control.
- 3) Network Imaging - Provides an integrated object management extension for Oracle applications.
